

# Detox Services Demand Analysis

For the MAT SU HEALTH FOUNDATION

March 2017

## Final Detox Study Report Forward

- This report includes new data, specifically:
  - Inclusion of general community hospital inpatient detoxification procedures in addition to inpatient detoxification services in Behavioral Health (BH) / Drug and Alcohol Treatment (D&A) Facilities provides a more comprehensive picture of service need. Limiting the study, as originally requested, to defined inpatient detox beds in a BH facility excluded the role community hospitals have in providing detox services. The inclusion of community hospital utilization results in a higher demand for inpatient detox bed need in Matanuska-Susitna Borough ("Mat Su") and Anchorage
  - Inclusion of drug and alcohol treatment services specifically for those arrested and requiring detoxification. This anticipates the impact of Alaska's SB91 law providing treatment alternatives for drug users instead of incarceration. This results in a higher demand for detoxification services in the community (vs. within the Department of Corrections facilities)
  - Inclusion of key elements from a survey of detox providers
  - Updated 2014 TEDs Admission data

## Contents

////////////////////

Total Estimated Detox Services Need in Mat Su and Anchorage by the Year 2020, General Population and Arrestees, Ages 12 and Older

Detox Service	Total Need	Existing	Projected Deficit
Inpatient Hospital, both D&A Facility and Community Hospital	23 beds	No D&A Facility Beds, no reported designated Community Hospital Detox Beds	23 beds
Residential Detox*	18 beds	14 beds	4 beds
Ambulatory Detox	78 visits per day	None reported	78 visits per day

\*Includes a 40% increase over the statistical demand to accommodate local provider wait times of 3 weeks, highly variable patient arrival fluctuations due to great distances patients must travel, and out-of-region referrals

## Executive Summary: Overview

- The report is focused on determining the demand for substance abuse treatment services in three specific modalities:
  - Inpatient Hospital Detoxification
  - Residential Treatment Detoxification
  - Ambulatory Detoxification
- Demand is estimated and projected over the next thirty years (from 2015 through 2045) by three age groups (age 12-17, age 18-54, and age 55+)
- Demand is based exclusively on the populations in two regions as defined by the US Census, Core Based Statistical Area #11260
  - Matanuska-Susitna Borough (“Mat Su”)
  - Anchorage
  - And these two regions combined

## Executive Summary: Inpatient Hospital Detox Bed Demand

### Inpatient Hospital Detox 2015-2025

- a) The following table shows the need for inpatient community hospital beds and specialty BH Drug/Alcohol beds for Mat Su and Anchorage and for both the general population as well as arrestees
- b) There were no non-governmental BH facility Inpatient Hospital Detox Beds in Mat Su Borough or Anchorage in 2015. There were also no known community hospital beds (e.g on an inpatient psychiatric unit) reported specifically for detox
- c) With those assumptions, the region had a shortage of 22 Inpatient Hospital beds in 2015, increasing to 28 beds in 2045
- d) A detailed breakdown by inpatient bed type (BH Facility, Community Hospital) and by general population and those arrested for crimes appears later in the report

## Executive Summary: Inpatient Hospital Detox Bed Demand

Year	Age 12-17 Bed Need	Age 18-54 Bed Need	Age 55+ Bed Need	Total Inpatient Detox Bed Need by Year
Yr 2015	2	19	1	22
Yr 2020	2	19	1	23
Yr 2025	2	20	2	24
Yr 2030	2	21	2	25
Yr 2035	3	22	2	27
Yr 2040	3	23	2	27
Yr 2045	3	24	2	28

- The total Inpatient Hospital Detox bed need for the general population as well as arrestees in Mat Su / Anchorage is for 22 beds in 2015, increasing to 28 beds in 2045
- This is the combined inpatient hospital demand for both general community hospitals and specialty Behavioral Health (BH) facilities providing detox in Mat Su / Anchorage
- Nationally about 84% of detox procedures occur in community hospitals and 16% in specialty BH facilities

## Executive Summary: Residential Detox Bed Demand

### Residential Detox Bed Demand

- a) The following table shows the need for Residential Detox beds for Mat Su and Anchorage and for both the general population as well as arrestees
- b) There are 14 Residential Detox beds in Anchorage; these are not designated by age group
- c) In 2015 the combined Mat Su and Anchorage region had a statistical deficit of 2 Residential Detox beds: an excess of 2 beds for adults, a 2 bed deficit for adolescents, and a 1 bed deficit for older adults.
- d) In 2025 the combined is projected to have an overall 4 bed deficit, 3 too few beds for adolescents, a 0 bed deficit for adults, and a 2 bed deficit for older adults
- e) **However because of the great distances patients must travel to receive Residential Detox services, out-of-region placements, and the provider reported wait times (about 3 weeks) for this service we recommend increasing the statistical demand by 40%. These could be “swing” beds to accommodate different age groups**
- f) A detailed breakdown by Residential bed need by general population and those arrested for crimes appears later in the report

## Executive Summary: Residential Detox Services @ 80% Occupancy

Year	Age 12-17 Bed Deficit Too Few Beds	Age 18-54 Deficit (Excess Beds)	Age 55+ Bed Need	Total Statistical Additional Residential Detox Bed Need	Existing Residential Detox Beds in Mat Su / Anchorage	Recommended Additional Residential Detox Beds (Adaptive Bed Allocation*)	Total Residential Detox Beds in Mat Su / Anchorage
Yr 2015	2.3	(2.0)	1.4	1.7	14	2	16
Yr 2020	2.5	(1.6)	1.6	2.5	14	4	18
Yr 2025	2.6	(0.2)	1.7	4.1	14	6	20
Yr 2030	2.7	1.3	1.8	5.8	14	8	22
Yr 2035	2.8	2.7	1.9	7.4	14	10	24
Yr 2040	2.8	3.5	2.0	8.4	14	12	26
Yr 2045	2.9	4.2	2.2	9.3	14	13	27

- There is a total projected operational Residential Detox bed deficit of 6 beds by 2025 in the combined regions for both the general population and arrestees
  - A (negative number) = a statistical excess of beds
- \* For Residential detox, we are recommending a 40% increase to the statistical demand in order to accommodate reported local provider operating wait times, out-of-region referrals, and highly variable patient arrival fluctuations / queuing delays due to the great distances many patients travel for this care in Alaska both within and beyond Mat Su and Anchorage*

## Executive Summary: Ambulatory Detox Demand

- Demand for Ambulatory Detox is shown as the average number of visits per workday (using 249 workdays per year) and the total number of visits per year
- No existing Ambulatory Detox services were identified in either of the two regions based on Treatment Episode Data Set for Admissions in 2013 and in 2014
- The inclusion of arrestees in Mat Su and Anchorage to the general population ambulatory detox significantly increases the need for this service. Nationally courts and justice systems are sending many individuals to outpatient detox treatment
- In 2015, the demand by individuals in the general population and among those arrested for Ambulatory Detox visits in Mat Su and Anchorage was about 19,000 visits per year or 76 per work day

## Executive Summary: Demand for Ambulatory Detox Visits

Arrestees and General Population	Year	Age 12-17 Visits Per Workday	Age 18-54 Visits Per Workday	Age 55+ Visits Per Workday	All Ages Visits Per Work Day Demand and Deficit*	Total Annual Demand and Deficit for Visits All Ages
	Yr 2015	2	71	3	76	18,967
	Yr 2020	2	72	3	78	19,462
	Yr 2025	3	76	4	82	20,446
	Yr 2030	3	80	4	87	21,566
	Yr 2035	3	84	4	91	22,574
	Yr 2040	3	86	4	93	23,211
	Yr 2045	3	88	4	95	23,774

- This is projected need for outpatient detox services in Mat Su and Anchorage for both the general population and arrestees; by the year 2025 this is about 82 visits per day
- Arrestees in Mat Su and Anchorage account for about 97% of the projected ambulatory detox need, suggesting services could be designed to focus on this population
- There are no documented ambulatory detox services in the region

# Service Definitions, Data Notes and Limitations, Methodology, Assumptions, References

Determining the Need for Detoxification Services

## Service Definitions

### Defining "Inpatient Hospital" in this Report

- Treatment Episode Data Set (TEDS) "Behavioral Health / Drug and Alcohol Treatment (D&A) Facility" or "D&A Treatment Facility" = Facilities reporting TEDS data generally receive State alcohol and/or drug agency funds for the provision of alcohol and/or drug treatment services. (SAMHSA TEDS codebook) These are often licensed by a State Dept. of Behavioral Health / MH/ Substance Abuse Treatment Agency
- Healthcare Cost and Utilization Project (H-CUP) "Community Hospitals" = "short term, non Federal, general, and other hospitals, excluding hospital units of other institutions (e.g. prisons). HCUP data include obstetrics and gynecology, otolaryngology, orthopedic, cancer, pediatric, public, and academic medical hospitals. Excluded are long-term care, rehabilitation, psychiatric, and alcoholism and chemical dependency hospitals." (Healthcare Cost and Utilization Project Statistical, Nationwide Inpatient Sample database description)

## Service Definitions

- TEDS Databases\*:
  - “Behavioral Health / Drug and Alcohol Treatment (D&A) Facility” or “D&A Treatment Facility” = This is Inpatient Hospital Detox = 24 hour per day medical acute care services in a hospital setting for detoxification of persons with severe medical complications associated with withdrawal
  - Residential Detox = 24 hour per day services in a non-hospital setting providing safe withdrawal and transition to ongoing treatment
  - Ambulatory Detox = Outpatient treatment services providing for safe withdrawal in an ambulatory setting (pharmacological or non-pharmacological)
- HCUP Databases\*\*:
  - H-CUP “Community Hospitals” = “short term, non Federal, general, and other hospitals, excluding hospital units of other institutions (e.g. prisons). HCUP data include obstetrics and gynecology, otolaryngology, orthopedic, cancer, pediatric, public, and academic medical hospitals. Excluded are long-term care, rehabilitation, psychiatric, and alcoholism and chemical dependency hospitals.”

\* *Treatment Episode Data Set Admissions (TEDS-A) 2014, Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration Codebook*

\*\* *Healthcare Cost and Utilization Project Statistical, Nationwide Inpatient Sample database description*

## Data Notes and Limitations

- Because Alaska has very few detoxification services, it is likely that any new or expanded detoxification program will have admissions from throughout the State, not just from two specific regions. Serving more of the State would significantly increase actual operating demand and volume.
- This broader demand is factored into the Residential Detox bed need since local general hospitals provide Inpatient Hospital detoxification, for example, patients through the hospital Emergency Department
- The projections in the report are conservative and reflect **primarily the projected need for residents of Mat Su and Anchorage.**
- **Projected demand is separately defined for Mat Su and for Anchorage, and for the general population as well as those who have been arrested (“arrestees”)**

## Data Notes and Limitations

- Detoxification demand among arrestees are included separately and in addition to the general population in order to gauge the potential impact of Alaska's SB91, which is expected to result in greater utilization of community drug and alcohol treatment services, for example, through Pre Trial Services
- Utilization is based on the US Department of Health and Human Services, Substance Abuse and Mental Health Administration (SAMHSA) Treatment Episode Data (TED), the National Survey on Drug Use and Health (NSDUH), the Agency for Healthcare Research and Quality (AHRQ) Healthcare Cost and Utilization Project (H-CUP), the FBI's Uniform Crime Reports, and survey results of detoxification providers in Alaska suggested by the Mat Su Health Foundation

## Data Notes and Limitations

- This data identifies the number or frequency of admissions and discharges, not the number of individual clients or patients. One patient may have multiple admissions and discharges. A Demand study uses admissions and discharges to determine need, not the number of unique individuals
- “Bed deficit” is the difference between the projected need (or “demand”) and the current number of beds. The current number of beds is based on the “Alaska Behavioral Health System Assessment, Regional Data Report 2009-2013” report, related regional assessments, provider survey results, and conference calls with detox providers in Mat Su / Anchorage
- Alaska does not participate, or does not have data available as of this report in the Healthcare Cost and Utilization Project (HCUP) National Inpatient Sample (NIS) or HCUP State Inpatient Database, nor the Nationwide Emergency Department Sample (NEDS), nor the FBI’s National Incident-Based Reporting System (NIBRS). For this reason most utilization data is based on national rates. *The use of national data to make state and local level estimates is less reliable than the use of state level data.*

## Methodology

- A formal Demand Analysis is used to determine the expected need for detox services in Mat Su Borough and in Anchorage, Alaska
- The analysis determined utilization rates per 10,000 US Resident Population for the three detoxification service types and applied those rates to the age groups in the two regions based on population in five year increments from 2015 through 2045
- Additional rates factored into the Demand Analysis include: Days Waiting for Treatment by each detox service type and age group, Deaths due to Alcohol or Drugs (inpatient hospital detox), and community hospital detox procedures
- Local provider input is also used to adjust the need for Residential Detox beds in Mat Su / Anchorage; this includes waiting lists, out-of-region placements, and high variances in access due to the great distances many patients travel for the service.
- Schafer Consulting's field experience with behavioral health services in Alaska and nationally is also expressed in the form of recommendations

## Assumptions

- The study assumes that the utilization (admissions, median length of stay) of detoxification services will be consistent over the next five to ten years, and that death rates and days waiting for admission will stay about the same as 2013; total admissions and LOS rates for 2014 are close to those in 2013. Actual utilization may increase or decrease, effecting the projected need.
- Bed demand is calculated at 80% occupancy
- The Opioid epidemic (primarily opioid pain relievers and heroin) in the United States is driving unprecedented demand for drug treatment in all levels of care. The Substance Abuse and Mental Health Services Administration as well as recent peer-reviewed research indicate capacity is significantly below the need for treatment. See the following data

## Assumptions

- Nationally, the rate of opioid abuse or dependence was 891.8 per 100,000 people while the treatment capacity was 540.2 per 100,000, or only 61% of needed capacity (a)
- As a result, this study assumes the Opioid epidemic will continue, as will the gap in service capacity, and specifically affects the demand for inpatient hospital detoxification (b)

# Population Demographics

Matanuska-Susitna / Anchorage Boroughs Core Based Statistical Area

## Executive Summary Overview

Population is a key driver of demand

- The total population of Age Groups 12-17, 18-54, and 55+ in Mat Su Borough is projected to increase by 23,400 residents between 2015-2025, a 29% increase
- The total population of these age groups in Anchorage is projected to increase by 17,600 residents, a 7% increase between 2015-2025
- The Mat Su and Anchorage regions account for 54% of the total resident population of Alaska in 2015 and increases to 56% of the total Alaska population (all ages) by 2025
- Because the Mat Su and Anchorage regions are over half the State's population, it is very likely that any expanded detoxification services should anticipate admissions and utilization beyond the demand from these two geographic areas

## Population Summary

- Mat Su's population for the three age groups (age 12-17, 18-54, 55+) is expected to increase 85% by 2045, with the greatest increase among older adults (91%)
- Anchorage's population for the three age groups increases 16% by 20145, with older adults age 55+ having the highest increase (41%)
- In 2015 Mat Su's population for the three age groups accounts for 25% of the total age group population in both regions; this increases to 34% by 2045
- The combined regions population increases by 107,440 people from 2015 through 2045
- Planning for Detoxification services in the region will need to anticipate this overall growth as well as a significant increase in older adults

## Population: Treatment Age Groups

- The Substance Abuse and Mental Health Services Administration TEDS-A and Treatment Episode Data Set Discharges are organized into eleven age groups from 12 through 55 and over
- To study the need for Inpatient Hospital, Residential, and Ambulatory detoxification services the analysis uses the following age groups ("Age Groups"):
  - Adolescents age 12-17
  - Adults age 18-54
  - Older adults age 55+

## Total Population – All Ages

Combined Regions Total Resident Population								
Region	Yr 2015	Yr 2020	Yr 2025	Yr 2030	2035	2040	2045	Percent Change
Mat Su	100,178	113,415	127,144	141,247	155,442	169,418	182,836	83%
Anchorage	298,908	309,692	318,629	325,533	330,821	335,148	339,171	13%
<b>Total Regions</b>	<b>399,086</b>	<b>423,107</b>	<b>445,773</b>	<b>466,780</b>	<b>486,263</b>	<b>504,566</b>	<b>522,007</b>	<b>31%</b>

- The total resident population of Mat Su Borough increases 83% from 2015 through 2045; this is a much higher rate of growth than Anchorage which increases 13% during this time
- Together the two regions increase from 399,000 to 522,000 people over the 30 year period

## Population by Age Groups – Adolescents, Adults, Older Adults

Mat Su

Age Groups	2015	2020	2025	2030	2035	2040	2045	Percent Change
Age 12-17	8,983	10,484	11,462	12,031	13,127	14,547	15,970	78%
Age 18-54	48,473	53,737	60,869	68,649	75,702	81,887	88,593	83%
Age 55+	23,763	28,686	32,322	35,398	38,543	42,280	45,409	91%
Total	81,219	92,907	104,653	116,077	127,372	138,714	149,972	85%

Anchorage

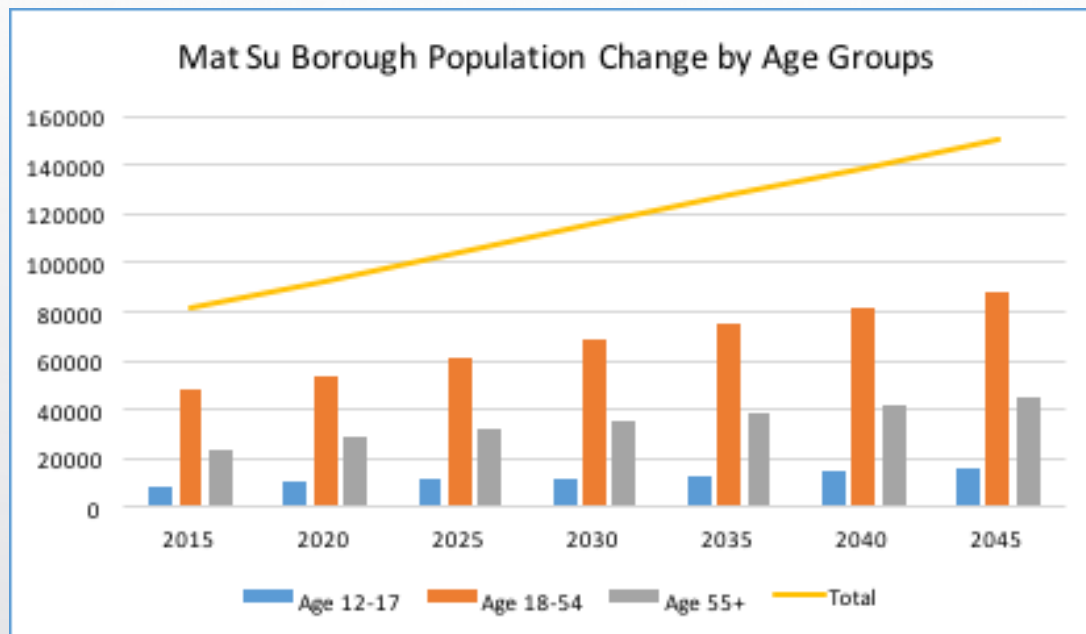

Age Groups	2015	2020	2025	2030	2035	2040	2045	Percent Change
Age 12-17	23,446	24,715	25,237	25,947	26,319	25,667	25,309	8%
Age 18-54	159,274	157,716	161,038	165,666	169,696	169,999	168,895	6%
Age 55+	65,757	75,326	79,820	82,017	83,765	88,330	92,961	41%
Total	248,477	257,757	266,096	273,630	279,780	283,997	287,166	16%

Mat Su:  
All age groups  
increase  
significantly

Anchorage:  
Older adults  
increase 41%;  
adolescents and  
adults increase  
slightly

In 2015  
Anchorage  
accounts for 75%  
of the combined  
regions  
population; by  
2045, it drops to  
66% of the  
combined  
regions  
population

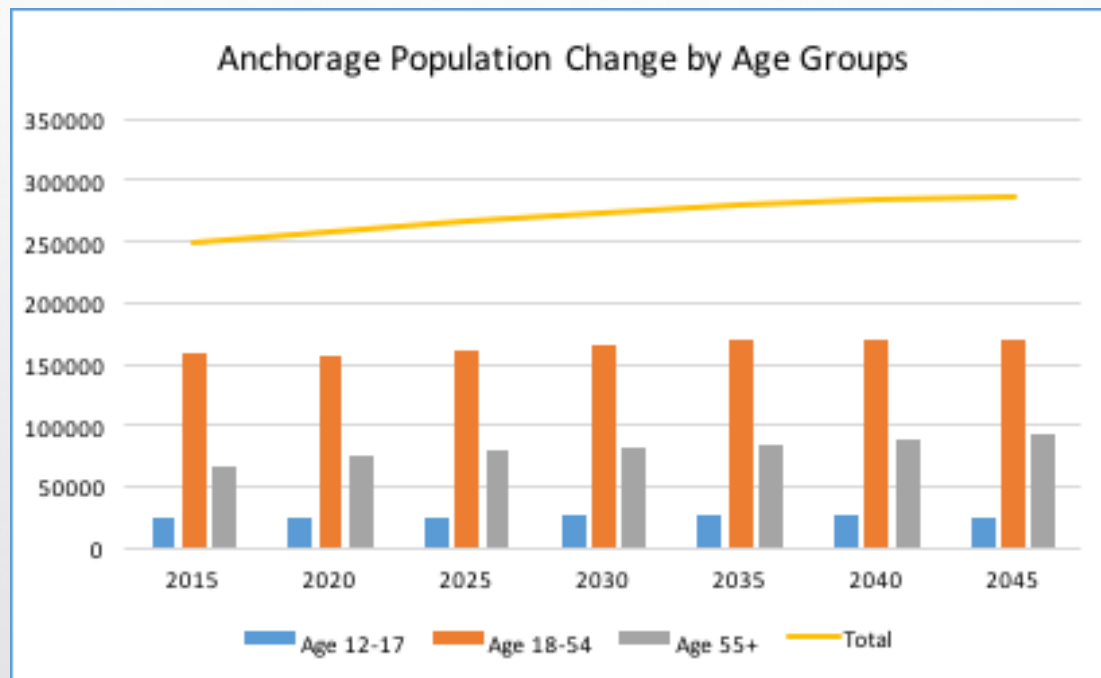

## Mat Su Borough Population Change

All age groups increase significantly, particularly for those age 55 and older (91%)

## Anchorage Population Change

Those age 55 and older increase the most in Anchorage

By 2045, older adults account for 33% of the total resident population in the combined regions

# National Drug & Alcohol Treatment Services Trends

Summary Trends Pertinent to Treatment Services and Demand for Detox

## National 2014 Drug & Alcohol Treatment Distribution by Service Type and Age Group

Age Group	Detox, Community Hospital	Detox, D&A Hospital Inpatient	Detox, 24 HR, Free Standing RES	Rehab/RES, Hospital Non Detox	Rehab/RES, Short Term (30 Days or Fewer)	Rehab/RES, Short Term (More than 30 Days)	Ambulatory, Intensive Outpatient	Ambulatory, Non Intensive Outpatient	Detox, Ambulatory	Grand Total
Age 12-17	295	199	1,828	15	6,079	6,252	10,087	53,553	3	78,311
Age 18-54	263,320	41,925	276,715	3,660	132,824	103,313	166,198	667,569	15,481	1,671,005
Age 55+	19,895	7,755	31,581	422	11,585	7,047	11,532	56,016	2,451	148,284
All Ages	283,510	49,879	310,124	4,097	150,488	116,612	187,817	777,138	17,935	1,897,600
Treatment Percent	(15%)	(3%)	(16%)	0%	8%	6%	10%	41%	(1%)	100%

- The table above includes detox services in Community Hospitals
- 41% of those receiving D&A treatment did so in a Non Intensive Outpatient setting
- Most detox services are provided in a Community Hospital or free standing Residential Treatment program, relatively few are provided in a D&A Inpatient facility

## 2014 National Detox Only Service Setting

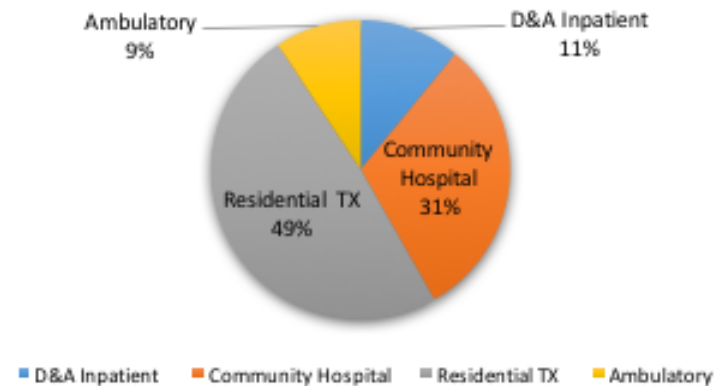

Detox Service Setting	D&A Inpatient	Community Hospital	Residential TX	Ambulatory	Total
Admissions	52,373	283,510	310,124	17,935	663,941
Admission %	8%	(43%)	(47%)	3%	100%
Patient Days	480,139	1,357,861	2,148,207	409,799	4,396,006
Patient Days %	11%	(31%)	(49%)	9%	100%
Rate per 10,000	19	70	79	15	184
Rate per 10,000 %	11%	38%	43%	8%	100%

Most detox admissions and patient days occur in RTCs and Community Hospitals

2014 Admission % by Detox Service Setting

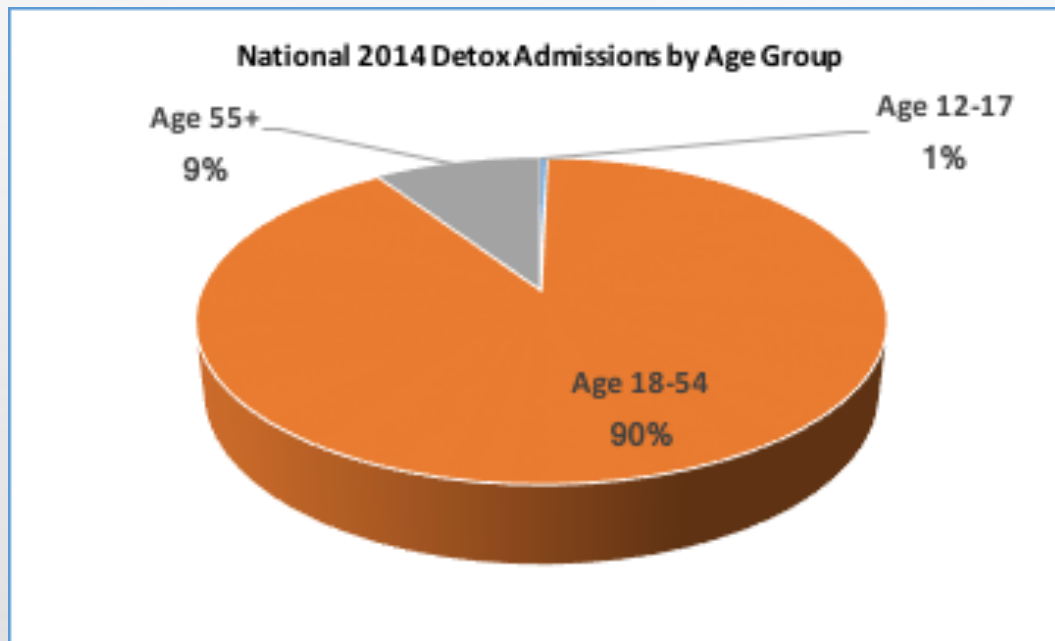

2014 Patient Days % by Detox Service Setting

## 2014 National Detox Admissions by Age Group

Age Group	Age 12-17	Age 18-54	Age 55+	Total
National Sum of All Detox Admissions by Age Group	2,331	599,537	62,070	663,941
Age Group Percent	0.4%	90%	9%	100%

- Few adolescents received detox services in 2014
- Older adults accounted for less than 10% of detox services
- Adults age 18-54 received 90% of all detox services in 2014
- Detox services in Mat Su and Anchorage should focus mostly on those for adults

# Inpatient Hospital Detox Bed Need

Mat Su Borough and Anchorage 2015-2045

## Two Inpatient Hospital Detox Settings

There are two types of inpatient hospital detox service settings that the study examines. Most detox occurs in community hospitals, typically following admission through the hospital Emergency Department. Community hospital utilization data has been added to the original report to give a more complete picture of inpatient hospital detox services and service need.

1. A D&A Treatment Facilities; often a Behavioral Health Hospital or Drug and Alcohol Treatment program
2. A Community Hospital, a general acute care hospital that is not owned or operated by a government entity

## Two Patient Populations Using Inpatient Hospital Detox

In addition to two different types of inpatient hospitals, there are also two populations each with distinct utilization patterns:

1. General population
2. Arrestees – individuals arrested for any offense: crimes against persons, property, society, and Group B offenses (e.g. disorderly conduct, DUI, Drunkenness, etc.)

For details regarding Arrestee data, please see the "Criminal Justice" section of the report

Summary of Inpatient Hospital Detox Demand, General Population & Arrestees, Combined D&A and Community Hospitals, Mat Su and Anchorage

Arrestees and General Population, D&A Inpatient & Community Hospital Inpatient, Mat Su & Anchorage	Year	Age 12-17 Bed Need	Age 18-54 Bed Need	Age 55+ Bed Need	Total Inpatient Detox Bed Need by Year
	Yr 2015	2	19	1	22
	Yr 2020	2	19	1	23
	Yr 2025	2	20	2	24
	Yr 2030	2	21	2	25
	Yr 2035	3	22	2	27
	Yr 2040	3	23	2	27
	Yr 2045	3	24	2	28

Demographic	Beds	Percent
General Population	8	36%
Arrestees	14	64%
Total	22	100%

- Although there are community hospitals providing inpatient detox, the number of beds “designated” only for this service alone is not known and assumed to be undefined
- There are no reported D&A Inpatient hospital beds in the region

64% of the projected inpatient hospital detox bed need in 2015 is for those who have been arrested in Mat Su and Anchorage

- Alaska’s SB91 is expected to shift the approach to corrections for those with drug and alcohol addictions from prisons to evidence-based pretrial supervision; in-prison and community-based alcohol and substance abuse treatment. Inpatient hospital detox services in the community will need to increase.

////////////////////////////////////

Inpatient Hospital Detox and Community Hospital Combined Bed Need Summary For the General Population

Mat Su & Anchorage General Population, D&A Facility and Community Hospital Bed Need	Year	Age 12-17 Demand	Age 12-17 Capacity	Age 12-17 Deficit	Age 18-54 Demand	Age 18-54 Capacity	Age 18-54 Deficit	Age 55+ Demand	Age 55+ Capacity	Age 55+ Deficit	Total Bed Deficit
	Yr 2015	0	0	0	7	0	7	1	0	1	8
	Yr 2020	0	0	0	8	0	8	1	0	1	8
	Yr 2025	0	0	0	8	0	8	1	0	1	9
	Yr 2030	0	0	0	8	0	8	1	0	1	9
	Yr 2035	0	0	0	9	0	9	1	0	1	10
	Yr 2040	0	0	0	9	0	9	1	0	1	10
	Yr 2045	0	0	0	9	0	9	1	0	1	10

- In 2015 there was an inpatient hospital bed shortage in Mat Su / Anchorage of 7 beds for adults, typically 2 in a D&A Facility and 5 in Community Hospitals; without the addition of designated inpatient detox beds in the region, this increases to a total demand for 8 adult beds in 2025
- The primary demand for inpatient hospital beds, both D&A and Community Hospitals is for adults
- In 2015 there was an overall one bed bed shortage for older adults which does not change going forward

	Yr 2040	3	0	3	14	0	14	1	0	1	17	Low
	Yr 2045	3	0	3	14	0	14	1	0	1	18	Low

- The table above shows the likely inpatient hospital bed need for those arrested in Mat Su & Anchorage. Arrest data is based on national FBI rates. Please refer to the Criminal Justice System section of the report for more detail
- There may be some “cross over” between the projected inpatient bed need for the general population and for those arrested, but we estimate this to be small since those now arrested receive treatment services in corrections settings
- Bed utilization for those arrested is based on the NSDUH 2014 Substance Abuse and Mental Health Data Archive (SAMHDA) Public Use Data Files and Online Analysis tool
- \* Because inpatient hospital detoxification services are not differentiated by D&A Facility and Community Hospital this distinction is not included in the above table

# Residential Detox Bed Need

Mat Su Borough and Anchorage 2015-2045

Residential Detox Adaptive Bed Demand @ 80% Occupancy in Mat Su/Anchorage for General Population & Arrestees

Arrestees and General Population, Residential Detox Demand	Year	Age 12-17 Bed Deficit Too Few Beds	Age 18-54 Deficit (Excess Beds)	Age 55+ Bed Need	Total Statistical Additional Residential Detox Bed Need	Existing Residential Detox Beds in Mat Su / Anchorage	Recommended Additional Residential Detox Beds (Adaptive Bed Allocation*)	Total Residential Detox Beds in Mat Su / Anchorage
	Yr 2015	2	(2)	1	2	14	2	16
	Yr 2020	2	(2)	2	3	14	4	18
	Yr 2025	3	(0)	2	4	14	6	20
	Yr 2030	3	1	2	6	14	8	22
	Yr 2035	3	3	2	7	14	10	24
	Yr 2040	3	4	2	8	14	12	26
	Yr 2045	3	4	2	9	14	13	27

- Based on national utilization data and considering the 14 bed residential detox facility in Anchorage, the *statistical demand* for RTC detox beds is insufficient based on a survey of providers in Alaska
- That survey and interactions with the provider community revealed that important forces should be factored into the real bed need: *wait times, out-of-region referrals, and highly variable patient arrival fluctuations / queuing delays due to the great distances many patients travel for this care*
- Based on the above, a 40% increase in beds ("Adaptive Bed Allocation") is factored into the projected actual local need

Residential Detox Statistical Bed Demand @ 80% Occupancy in Mat Su/Anchorage for the General Population

Residential Detox Bed Demand, Mat Su & Anchorage, General Population	Year	Age 12-17 Demand	Age 12-17 Capacity	Age 12-17 Deficit	Age 18-54 Demand	Age 18-54 Capacity	Age 18-54 Deficit	Age 55+ Demand	Age 55+ Capacity	Age 55+ Deficit	Total Bed Deficit	Reliability
	Yr 2015	0	0	0	15	14	1	1	0	1	1	High
	Yr 2020	0	0	0	15	14	1	1	0	1	2	High
	Yr 2025	0	0	0	16	14	2	1	0	1	3	High
	Yr 2030	0	0	0	16	14	2	1	0	1	4	Moderate
	Yr 2035	0	0	0	17	14	3	1	0	1	4	Moderate
	Yr 2040	0	0	0	18	14	4	1	0	1	5	Low
	Yr 2045	0	0	0	18	14	4	1	0	1	5	Low

- This table shows the statistical bed demand based on national 2014 Treatment Episode Data Set utilization by the three age groups for the general population in Mat Su and Anchorage; the bed need is minimal
- However, while accurate using national admission, median length of stays, and days waiting for treatment, we do not believe this sufficiently factors in the “on the ground” situation in Alaska
  - Improving data collection and reporting may help provide a foundation for more accurate local bed need analysis

Residential Detox Statistical Bed Demand @ 80% Occupancy in Mat Su/Anchorage for Arrestees

Residential Detox Bed Demand, Mat Su & Anchorage, Arrestees	Year	Age 12-17 Demand	Age 12-17 Capacity	Age 12-17 Deficit	Age 18-54 Demand	Age 18-54 Capacity	Age 18-54 Deficit (Excess)	Age 55+ Demand	Age 55+ Capacity	Age 55+ Deficit	Total Bed Deficit	Reliability
	Yr 2015	2	0	2	11	14	(3)	1	0	1	0	High
	Yr 2020	2	0	2	12	14	(2)	1	0	1	1	High
	Yr 2025	2	0	2	12	14	(2)	1	0	1	1	High
	Yr 2030	2	0	2	13	14	(1)	1	0	1	2	Moderate
	Yr 2035	3	0	3	14	14	(0)	1	0	1	3	Moderate
	Yr 2040	3	0	3	14	14	(0)	1	0	1	3	Low
	Yr 2045	3	0	3	14	14	0	1	0	1	4	Low

- This table shows the statistical bed demand based on national 2014 Treatment Episode Data Set utilization and FBI Uniform Crime Report by the three age groups for those arrested in Mat Su and Anchorage; the bed need is slightly less than that for the general population
- Again however, while accurate using national admission, median length of stays, days waiting for treatment and FBI data, we do not believe this sufficiently factors in the “on the ground” situation in Alaska and recommend the bed need previously summarized for both Arrestees and the General Population in Mat Su and Anchorage

# Ambulatory Detox Demand

Mat Su Borough and Anchorage 2015-2045

////////////////////////////////////

Ambulatory Detox Need in Mat Su/Anchorage for the General Population and Arrestees

Ambulatory Detox Need, Mat Su & Anchorage, Arrestees and General Population	Year	Age 12-17 Visits Per Workday	Age 18-54 Visits Per Workday	Age 55+ Visits Per Workday	All Ages Visits Per Work Day Demand and Deficit*	Total Annual All Ages Demand for Ambulatory Detox Visits
	Yr 2015	2	71	3	76	18,967
	Yr 2020	2	72	3	78	19,462
	Yr 2025	3	76	4	82	20,446
	Yr 2030	3	80	4	87	21,566
	Yr 2035	3	84	4	91	22,574
	Yr 2040	3	86	4	93	23,211
	Yr 2045	3	88	4	95	23,774

- Work Day visits are based on 249 work days a year
- There are no or few ambulatory detox programs reported in the region

- There is relatively little projected demand for Ambulatory Detox among adolescents and older adults; the primary focus of outpatient detox services should be on adults
- It is evident from the following two slides that the greatest need for Ambulatory Detox is from those arrested rather than from within the general population

////////////////////////////////////

Ambulatory Detox Need in Mat Su/Anchorage for the General Population

Ambulatory Detox Need, Mat Su & Anchorage, General Population	Year	Age 12-17 Visits Per Workday	Age 18-54 Visits Per Workday	Age 55+ Visits Per Workday	All Ages Visits Per Work Day Demand and Deficit*	Total Annual All Ages Demand for Ambulatory Detox Visits	Reliability
	Yr 2015	-	2	0	2	500	High
	Yr 2020	-	2	0	2	532	High
	Yr 2025	-	2	0	2	562	High
	Yr 2030	-	2	0	2	591	Moderate
	Yr 2035	-	2	0	2	617	Moderate
	Yr 2040	-	2	0	2	641	Low
	Yr 2045	-	2	0	3	663	Low

- There is not a high demand for Ambulatory Detox services among those in the General Population in Mat Su / Anchorage
- As shown below, the demand is significant for those referred by the criminal justice system

### Ambulatory Detox Need in Mat Su/Anchorage for Arrestees

Ambulatory Detox Need, Mat Su & Anchorage, Arrestees	Year	Age 12-17 Visits Per Workday	Age 18-54 Visits Per Workday	Age 55+ Visits Per Workday	All Ages Visits Per Work Day Demand and Deficit*	Total Annual All Ages Demand for Ambulatory Detox Visits	Reliability
	Yr 2015	2	69	3	74	18,467	High
	Yr 2020	2	70	3	76	18,930	High
	Yr 2025	3	74	3	80	19,884	High
	Yr 2030	3	78	4	84	20,975	Moderate
	Yr 2035	3	82	4	88	21,957	Moderate
	Yr 2040	3	84	4	91	22,570	Low
	Yr 2045	3	86	4	93	23,112	Low

- The greatest need (about 97% of the total annual need) for Ambulatory Detox services is for those referred by the courts and the Department of Corrections, particularly Pre Trial Service's diversion programs
- Because Ambulatory Detox services are most frequently used by the courts, and diverts from higher levels of care, this service is important for the region to develop

# Criminal Justice System & Detox Services Need

Projected Detoxification Services Demand for Arrestees in Mat Su / Anchorage in Anticipation of SB91 Impact on Community Providers

## Criminal Justice System & Use of Community Detox Services

- SB91 intent is described as reinvesting in programs proven to reduce recidivism and protect public safety by directing funds over the next six years into evidence-based pretrial supervision; in-prison and community-based alcohol and substance abuse treatment; transitional support for offenders returning to the community; and victims' services and violence prevention programming (University of Alaska Anchorage Justice Center)
- Through communication with the Alaska Department of Corrections and the Mat Su Health Foundation and detox providers we were asked to estimate the impact of SB91 on the demand for detoxification services in Mat Su / Anchorage
- The following slides describe the approach and data used for these estimates which are included in the previous demand projections for Inpatient Hospital, Residential, and Ambulatory Detox

## Estimated and Projected Arrests by Age Group in Mat Su / Anchorage

- The following table shows estimates for the number of arrests in Mat Su / Anchorage and is based on national 2014 FBI Uniform Crime Report rates of arrest by age group per 10,000 population. This assumes the rate in Mat Su / Anchorage is comparable to that rate nationally.

<b>Projected Total Arrests Mat Su / Anchorage by Age Group</b>				
<b>Year</b>	<b>Age 12-17</b>	<b>Age 18-54</b>	<b>Age 55+</b>	<b>Age 12+ Total</b>
2015	993	9,778	521	11,291
2020	1,078	9,952	605	11,635
2025	1,124	10,444	652	12,220
2030	1,163	11,028	683	12,874
2035	1,208	11,550	711	13,469
2040	1,231	11,855	760	13,846
2045	1,264	12,119	805	14,187

## Methodology for Estimating Detox Needs Among Arrestees

- The Substance Abuse and Mental Health Data Analysis (SAMHDA) system was used to analyze detox utilization in the 2014 National Survey on Drug Use and Health
- Detox utilization data solely by this population for the State of Alaska was not available so national rates per 10,000 arrestees are used in the study
- Arrests by age group were not available for Mat Su and Anchorage; the FBI Uniform Crime Reports were used to determine an arrest rate per 10,000 arrestees; this rate was then applied to the Mat Su / Anchorage population
- A percent of the national population who were arrested in the past year and who also received detox in the past year is based on an analysis of the 2014 National Survey on Drug Use and Health; age group detox rates per detox service type are imputed

## National Arrests per 10,000 by Age Group 2014

Age Group	Age 12-17	Age 18-54	Age 55+	Total
US 2014 Resident Population	24,995,419	159,030,365	86,277,855	270,303,639
National Arrests FBI UCR 2014	765,395	7,484,811	501,712	8,751,918
Arrests per 10,000 Population	306	471	58	324

- National Arrest Rate per 10,000 general population, FBI UCR 2014 data
- These arrest rates by age group per 10,000 are applied to the Mat Su / Anchorage general population

## National Detox Distribution by Service Type and Age in 2014

- Based on the 2014 National Survey of Drug Use and Health, of those arrested and receiving a specific detox service in the past year:
  - 22% received Inpatient Detox
  - 30% received Residential Detox
  - 48% received Ambulatory Detox
- The age group distribution of those arrested and receiving any Detox service in the past year is:
  - Age 12-17: 15%
  - Age 18-54: 16%
  - Age 55+: 16%

*Source: Substance Abuse and Mental Health Administration, Substance Abuse and Mental Health Data Analysis (SAMHDA) online analysis tool*

## National Detox Rate Among Arrestees in 2014

- Based on the National Survey of Drug Use and Health in 2014 the following rates of detox per age group and per detox service type are applied to the need for Inpatient Hospital, Residential, and Ambulatory Detox in Mat Su / Anchorage among those arrested in the previous 12 months:

Age Group	% Inpatient of All Arrests Based on Distribution of Detox Type All Ages	% Residential for all Arrests Based on Distribution of Detox Type All Ages	% Ambulatory Based on Distribution of Detox Type All Ages	Total Percent by Age Group
Age 12-17	3%	5%	7%	15%
Age 18-54	4%	5%	8%	16%
Age 55+	3%	5%	7%	16%

Detailed Methodology: Imputed Percent of Arrestees Receiving Inpatient, Residential, or Ambulatory Detox by Age Group

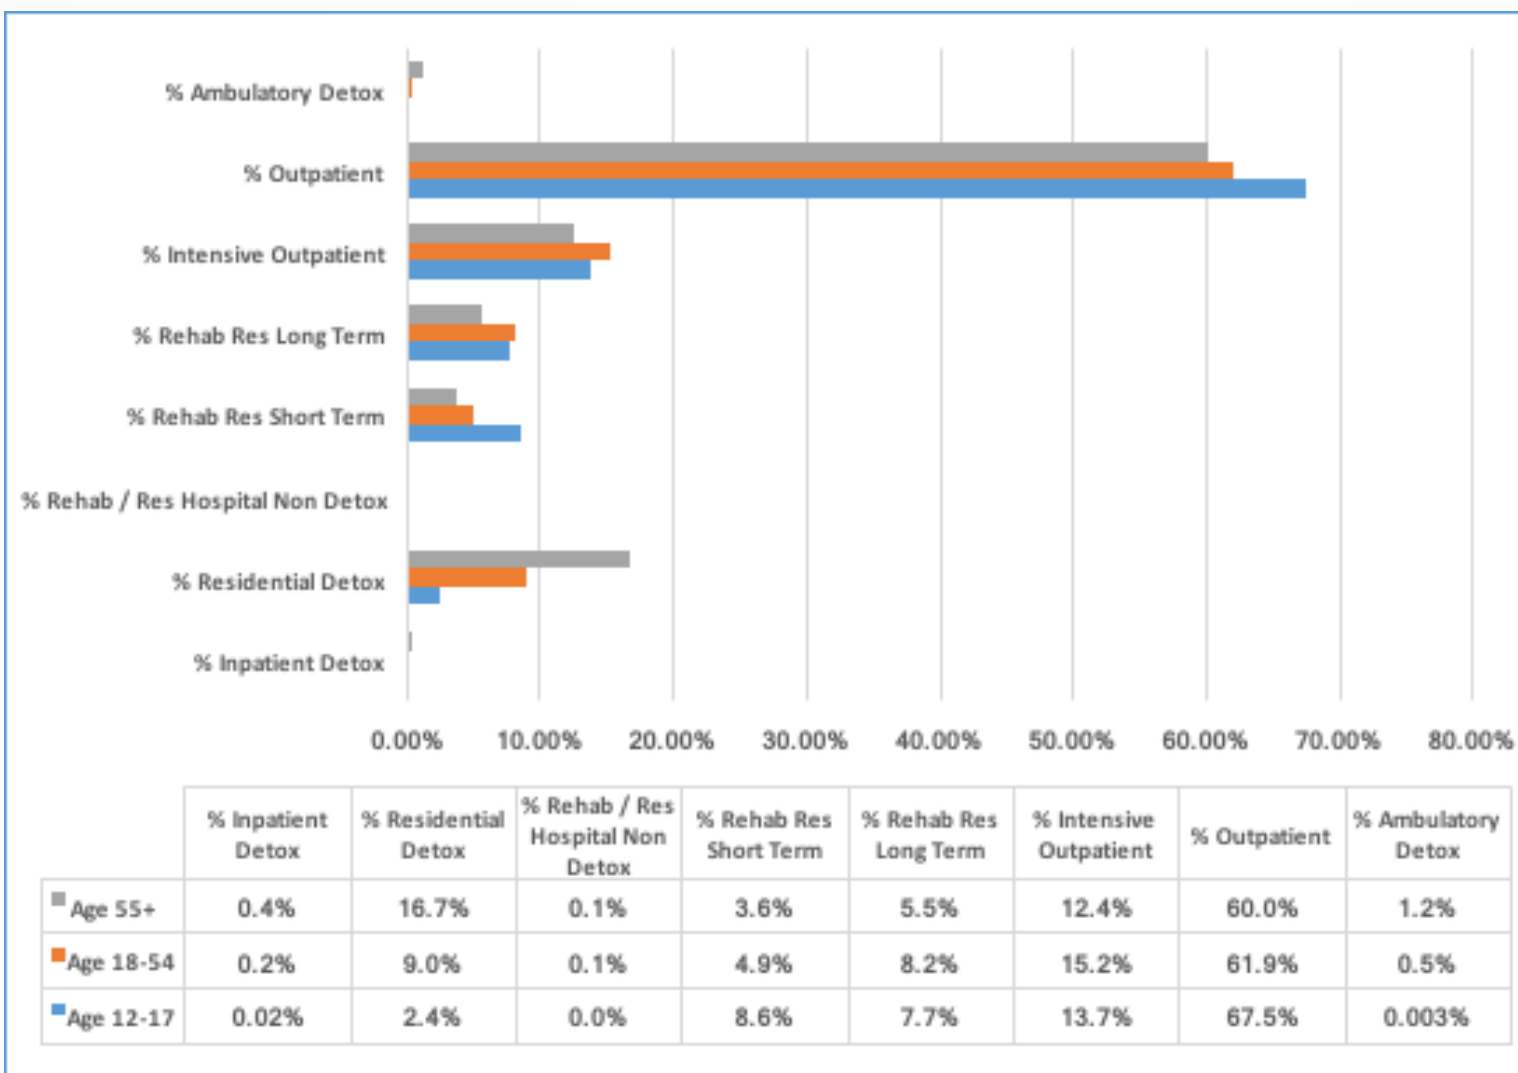

Age Group	Total Arrests	Percent of Arrestees That Received Detox	Arrestees Detoxed	Inpatient Detox @ 22% of all Detox Services	% Inpatient of All Arrests Based on Distribution of Detox Type All Ages	RTC Detox @ 30% of all Detox Services	% RTC for all Arrests Based on Distribution of Detox Type All Ages	OP Detox @ 48% of all Detox Services	% OP Based on Distribution of Detox Type All Ages	Total Percent
Age 12-17	450,640	15.3%	68,881	15,325	3.4%	20,754	4.6%	32,802	7.3%	15.3%
Age 18-54	4,612,917	16.4%	756,348	168,273	3.6%	227,889	4.9%	360,186	7.8%	16.4%
Age 55+	811,128	15.6%	126,930	28,240	3.5%	38,244	4.7%	60,446	7.5%	15.6%
Ages 12+	5,874,686	16.2%	952,159	211,838	22%	286,887	30%	453,434	48%	100.0%

- This table describes the methodology used to determine the percent of those arrested in the previous 12 months by both detox service type (Inpatient, Residential, and Ambulatory) as well as by age group
- The distribution of detox services by age group among arrestees is known but not by specific detox service and by age group (Inpatient, Residential, and Ambulatory) and (Ages 12-17, 18-54, and 55+)
- The resulting percentages for each service type and age group are used to estimate demand for detox services in Mat Su / Anchorage

## Overall 2014 National Source of Referrals to Drug & Alcohol Treatment Services by Legal Systems

61

- The graph depicts the percentage of patients in D&A treatment referred primarily by a court / legal system (TEDS-A 2014)
- Note that "Inpatient Detox" refers only to D&A Facilities, not all Community Hospitals
- Relatively few D&A agencies report patients in detox referred by the legal system

## Detailed Arrests & Detox Services Estimates in Mat Su / Anchorage for Adolescents

Year	Mat Su Anchorage Age 12-17 Population	Estimated Region Arrests (a)	3.4% of Arrestees Inpatient Detox (b)	Inpatient Length of Stay	Inpatient Detox Days	Inpatient Detox Beds @ 80% Occ	4.6% % of Arrestees Residential Detox	Residential Detox Length of Stay	Residential Detox Days	Residential Detox Beds @ 80% Occ	7.3% of Arrestees Ambulatory Detox	Ambulatory Detox Average Number of Visits per Admission	Ambulatory Visits Per Year	Ambulatory Visits Per Work Day
2015	32,428	993	34	18	604	2	46	14	622	2	72	8	556	2

## Matanuska-Susitna / Anchorage Core Based Statistical Area (CBSA) Substance Abuse Treatment, Client Characteristics

Previous Treatment Episodes, Primary Substance Problem, Psychiatric Problem in Addition to Substance Abuse, Veterans, Living Arrangement, Number of Arrests in Prior 30 Days, Employment Status, Insurance, Primary Source of Payment, Health Insurance, Principal Source of Income

## Client Characteristics Summary

- The following section identifies the number and percentage of clients from Mat Su and Anchorage in various domains pertinent to planning Detox and other Substance Abuse Treatment services for the regions
- National percentages are also shown in each domain to provide a comparison and context for the unique characteristics and needs of the regions
- Data is not available separately for Mat Su and Anchorage

Prior Substance Abuse Treatment Episodes Mat Su Borough  
and Anchorage Residents, 2014

Number of Prior Treatment Episodes	Total	Percent
Missing data	9	1%
No Prior Treatment Episodes	660	40%
1 Prior Treatment Episode	456	27%
2 Prior Treatment Episodes	236	14%
3 Prior Treatment Episodes	122	7%
4 Prior Treatment Episodes	70	4%
5 or More Prior Treatment Episodes	116	7%
<b>Total</b>	<b>1669</b>	<b>100%</b>

- 40% had no prior treatment
- 27% one prior treatment episode
- 14% two prior treatment episodes

## Primary Substance Abuse Problem Mat Su Borough and Anchorage Residents, 2014

Primary Substance Abuse Problem	Total	Percent	National
Alcohol	909	54%	36.2%
Heroin	279	17%	22.1%
Marijuana/Hashish	174	10%	15.3%
Other Opiates and Synthetics	111	7%	7.9%
Methamphetamine	109	7%	8.4%
Cocaine/Crack	34	2%	5.4%
Other Amphetamines	30	2%	0.1%
Other	9	0%	0.4%
Missing	7	0%	0.7%
Benzodiazepines	4	0%	0.9%
Other Hallucinogens	2	0%	0.1%
PCP	1	0%	0.3%
<b>Total Admissions</b>	<b>1,669</b>	<b>100%</b>	<b>97.8%</b>

- Over half of all admissions to Substance Abuse Treatment services for residents of Mat Su and Anchorage were for **Alcohol**

## Psychiatric Diagnosis in Addition to Substance Abuse Problem, Mat Su Borough and Anchorage Residents, 2014

- 45% of those from Mat Su and Anchorage entering a Substance Abuse treatment program also reported a Psychiatric problem
- Nationally, 26% reported a Psychiatric Problem in addition to an Alcohol/Drug problem

Response	Number	Percent
No	903	54%
Yes	750	45%
Missing	16	1%
<b>Total</b>	<b>1,669</b>	<b>100%</b>

Services that address co-occurring Substance Abuse and Mental Health are important to include in the regions delivery system

## Anchorage and Mat Su Veterans in Substance Abuse Treatment Care, 2014

- Relatively few veterans received substance abuse treatment in 2014
- This is consistent with the national percentage of veterans who received treatment in 2014 which was also 3%

Response	Number	Percent
No	1,576	94%
Missing	51	3%
Yes	42	3%
Total	1,669	100%

## Living Arrangements for Anchorage and Mat Su Residents in Substance Abuse Treatment Care, 2014

Living Arrangement	Number	Percent	National Percent
Missing	36	2%	2%
Homeless	311	19%	15%
Dependent Living	428	26%	19%
Independent Living	894	54%	65%
<b>Total</b>	<b>1,669</b>	<b>100%</b>	<b>100%</b>

- The majority of those from Mat Su and Anchorage who received Substance Abuse Treatment lived on their own @ 54%
- A little over 300 admissions were from those who were homeless, an important metric to consider in system improvement planning

## Number of Arrests in 30 Days Prior to Admission, Mat Su and Anchorage Residents 2014

- The percentages of Mat Su and Anchorage residents who entered Substance Abuse Treatment in 2014 with no prior 30 day arrests was higher than the national average
- Similar to the National average, comparatively few entering treatment had one or more prior arrests

Prior Arrests	Number	Percent	National Percent
Missing	7	0%	7%
None	1,546	93%	85%
Once	110	7%	7%
2 or More	6	0%	1%
Total	1,669	100%	100%

## Employment Status, Mat Su Borough and Anchorage Residents in Substance Abuse Treatment, 2014

Employment Status	Number	Percent	National Percent
Not in Labor Force	721	43%	37%
Unemployed	557	33%	38%
Full Time	233	14%	16%
Part Time	141	8%	8%
Missing	18	1%	1%
<b>Total</b>	<b>1,669</b>	<b>100%</b>	<b>100%</b>

- 6% more Mat Su and Anchorage residents were Not in the Labor Force compared to the national percentage of 37%
- **76%** of those entering Substance Abuse Treatment from Mat Su and Anchorage were not employed

- Definitions
  - "Not in Labor Force" = Not looking for work in the past 30 days or a student, homemaker, disabled, retired, or an inmate of an institution
  - "Unemployed" = Looking for work during the past 30 days or on layoff from a job

Primary Source of Payment for Substance Abuse Treatment, Mat Su Borough  
and Anchorage Residents, 2014

Source of Payment in 2014	Number	Percent	National Percent
Self Pay	488	29%	4.1%
Other Government Payments	374	22%	14.4%
Other	313	19%	3.2%
Medicaid	310	19%	7.6%
BC/BS, Other Health Insurance Company	123	7%	1.8%
Missing	45	3%	67%
No Charge (Free, Charity, Special Research, Teaching)	11	1%	1.6%
Medicare, Worker's Compensation	5	0%	0.3%
<b>Total</b>	<b>1,669</b>	<b>100%</b>	<b>100%</b>

- There are significant differences in the source of payment for treatment between those entering care from Mat Su and Anchorage and the rest of the country, especially:
- Much higher Self Pay, Medicaid, Other, and BC/BS or Other Health Insurance Company for residents from Mat Su and Anchorage

Health Insurance for Substance Abuse Treatment, Mat Su Borough and Anchorage Residents, 2014

Health Insurance	Number	Percent	National Percent
None	714	43%	19%
Medicare, Other (e.g. Tricare, CHAMPUS)	421	25%	5%
Medicaid	363	22%	11%
Private Ins, BC/BS, HMO	87	5%	7%
Missing	84	5%	58%
<b>Total</b>	<b>1,669</b>	<b>100%</b>	<b>100%</b>

- This specifies the client's health insurance, if any. This may or may not pay for alcohol or drug treatment
- 43% of those entering Substance Abuse Treatment from Mat Su and Anchorage had no health insurance compared to 19% nationally
- The percentage of Mat Su and Anchorage residents entering treatment with Medicare, Other (e.g. Tricare, Champus) was 5 times higher than the national percent
- And the percentage of Mat Su and Anchorage residents with Medicaid was twice as high as the nation as a whole

Principal Source of Income for Residents Receiving Substance Abuse Treatment, Mat Su Borough and Anchorage, 2014

Principal Source of Income	Number	Percent	National Percent
None	527	32%	23%
Other	419	25%	12%
Wages/Salary	386	23%	18%
Retirement/Pension	169	10%	4%
Public Assistance	144	9%	6%
Missing	24	1%	38%
<b>Total</b>	<b>1,669</b>	<b>100%</b>	<b>100%</b>

- The client's principal source of financial source at admission
- Clients receiving treatment from Mat Su and Anchorage reported a 9% higher rate of no principal source of income and
- Over twice the percentage indicating "Other" and "Retirement/Pension" as their source of income

Detailed Methodologies and Tables

# Detox Agencies Survey

Online Survey of Four Agencies Providing Detox Services in Alaska

## Detox Agencies Survey

- We conducted an online survey of four agencies providing detox services in Alaska identified by the Mat Su Health Foundation
- The survey was conducted to provide information specific to Alaska and the provision / need for Inpatient Hospital, Residential, and Ambulatory detox services
- Respondent identities and agencies were kept anonymous to encourage disclosure of information
- The information is helpful in adjusting national utilization data to the Mat Su / Anchorage region

## Detox Survey Responses

- All four agencies provide both drug and alcohol treatment, one only provides Ambulatory Detox, and three provide Residential detox services
- All four serve adults and older adults, one serves children/adolescents
- Three agencies provide services for active duty military,

Answer Options	Response Count
Hospital Inpatient Detox	0
Residential Detox	3
Ambulatory Detox	1
	4
Other (please specify):	
Social Detox,	1
Medical detox	2

- None of the four provider agencies indicated that they offer Hospital Inpatient Detox, however one respondent, in a subsequent question, indicated they use a Community hospital when necessary
- One offered Social Detox and two offered Medical Detox

## Detox Survey Responses

- Waiting List:
  - We have about a 3 week wait, this is currently due to a shortage of admission staff.
  - We only provides detox services to patients admitted to our residential program. Under supervision of the medical staff, if needed a person will be transferred to the hospital for severe withdrawal management
  - One or two weeks and only periodically
  - Because of staffing shortages you may have to wait approximately ten hours for a bed

## Detox Survey Responses

- When your Detox Program is full / wait List too long, what other agency do you refer patients to for detox services?

Answer Options	Response Count
Hospital Inpatient Detox	2
Residential Detox	1
Ambulatory Detox	2
Other	2

- Hospital Inpatient Detox = in a Community Hospital
- Other:
  - Primary Doctor
  - Try to keep the person engaged until an opening

## Detox Survey Responses

### Prioritizing Patients to Detox Service:

- First come, first serve – 2 responses
- Medical acuity – 1 response
- Patients from our region – 0 responses
- Other Responses:
  - The State requires we prioritize pregnant women and IV drug users
  - We only provide detox services to patients admitted to our residential program

## Detox Survey Responses

- How many admissions over the past 12 months?
  - There was one response for "Residential Detox", "approximately 350" and "this is low due to a lack of admission RN"
  - And one response for "Other", "Social Detox, about 50"
- What is your average occupancy?
  - Inpatient Hospital Detox – no response
  - Residential Detox – one response, "about 79% due to a shortage of admission staff"
  - Ambulatory Detox – 87%
  - Other – "8-10 daily census /16 bed capacity" = 50% - 63%

## Detox Survey Responses

- What is average length of stay?
  - Hospital Inpatient, no responses
  - Residential Detox, one response – 4-7 days
  - “Detox and Rehab combined approximately 30 days”, one response
  - “Other”:
    - “Social 7-14 days”
    - “3 day alcohol 10 day opioids”
- What percentage of your detox admissions come from outside the county/region in which your program is located?
  - Two responses indicate 30%
  - One response indicates 15%

## Detox Survey Responses

- What is the Payer Mix Percentage for your detox services?

Respondent	Medicaid	Medicare	BC/BS, Commercial (e.g. Aetna, Cigna)	Self Pay	Other Government / State Funding	No Charge (Free, Charity, etc.)	Other
Respondent A	*	*	*	*	100%	100%	*
Respondent B	65%	0%	10%	20%	*	5%	*

## Detox Survey Responses

- What is the average reimbursement per patient day or per outpatient visit for your detox service?
  - One response: "The state finds a medical bed at about \$365 per bed per day and a social per day perr (sic) bed at about \$265 a day"
- What is the average operating cost per patient day or per outpatient visit for your detox service?
  - One response: "about \$580 a day per bed to provide this service"

# Inpatient Hospital Detox Demand Detailed Methodology

Mat Su Borough and Anchorage, Based on Utilization Rates by Age Groups  
and Average Daily Occupancy at 80%

## Inpatient Hospital Detox Bed Demand Detailed Methodology

- The table below depicts the data and assumptions used to determine the national rate of admissions and patient days per 10,000 US Resident Population. The admission rates and median lengths of stay are derived from the Treatment Episode Data Set (TEDS) Admissions and TEDS Discharges Public Use Files. The rates are applied to the Mat Su and Anchorage populations by age groups.
- In addition to the TEDS data, national Community Hospital utilization is also factored into the need for Inpatient Hospital Detox services; these metrics are from the Healthcare Cost and Utilization Project Statistical, Nationwide Inpatient Sample, 2014
- Projections are made for both the General Population and those arrested

# Residential Detox Demand Detailed Methodology

Mat Su Borough and Anchorage, Based on Utilization Rates by Age Groups and Average Daily Occupancy at 80%

## Residential Detox Bed Demand Detailed Methodology

- The table below depicts the process used to determine the national rate of admissions and patient days per 10,000 US Resident Population.
- The admission rates and median lengths of stay are derived from the TEDS-A and TEDS-D Public Use Files. The rates are applied to the Mat Su and Anchorage populations by age groups.
- Projections are made using TEDs data for both the General Population and those arrested

## Residential Detox Detailed Demand

# Ambulatory Detox Demand Detailed Methodology

Mat Su Borough and Anchorage, Based on Utilization Rates by Age Groups and 249 Work Days per Year

## Ambulatory Detox Demand Detailed Methodology

10  
5

- The table below depicts the process used to determine the national utilization rate of Ambulatory Detox visits per 10,000 US Resident Population. The admission rates and median lengths of stay are derived from the 2013 TEDS-A and 2013 TEDS-D Public Use Files. The rates are then applied to the Mat Su and Anchorage populations by age groups.
- Due to the growing Opioid Epidemic, and service capacity gap, a factor of 20% has been added to the rate of admissions for all age groups. In 2012, Alaska's total Opioid treatment capacity was at 100% (Source: National & State Treatment Need and Capacity for Opioid Agonist Medication Assisted Treatment, Jones et al, 2015)
